Learning in Organizations: An Evidence-Based Approach examines the variety of systematic approaches and strategies for learning and development used in the workplace through the implementation of formal training, guided instruction, developmental job experiences, and self-directed learning. The hallmark of Learning in Organizations is an emphasis on research evidence of what is and is not known about learning and learning strategies and the translation of that evidence to guide best practices in workplace learning and development. The book features evidence on learning principles, new learning technologies, and strategies for developing individual, team, and leadership capabilities. The content of the chapters is enhanced by the inclusion of key learning goals for each chapter, case studies, chapter summaries, best practice recommendations, and a hands-on project for use in the classroom. Learning in Organizations provides researchers with a detailed investigation of learning practices to help drive future research. For learning practitioners, research evidence is translated into best practices that can be applied to enhance workplace learning and development. For undergraduate and graduate students, the book provides an up-to-date review of the key concepts and ways of thinking about and studying learning in the workplace.

The Human-Dimensions of Human-Computer Interaction commences a non-technical discussion about everyday computer usage and deals with the human-dimension or social context of effective HCI. It brings forward many of the hidden complexities of the human-dimensions of HCI, and owes to the educative nature of the techno-saga. The first three chapters are designed to set the background for the quality of the human/machine dimensions of HCI. Chapter four leaves the machine-side of the techno-saga to re-enter the usability context. Consequently, in this chapter people's techno-interactions are combined with the machine-side of the HCI equation to evaluate effective solutions that try to achieve techno-satisfying outcomes. While it still maintains the human side, chapter five covers cognitive performance. Chapter six becomes quite demonstrative, drawing away from the more usual linguistics to speak to the reader through a series of metaphorical human-dimensioned HCI models. Chapter seven brings the reader back to earth to concentrate again on the human-side of the HCI equation; this time to speak about expectations that people have in seeking techno-solutions to everyday issues. Chapter eight returns the focus to the machine-side; emphasizing that a balanced approach is necessary for achieving effective HCI, as this book would not be complete without a section for dealing with gender and how it relates, if at all, to HCI.

The essential e-learning design manual, updated with the latest research, design principles, and examples e-Learning and the Science of Instruction is the ultimate handbook for evidence-based e-learning design. Since the first edition of this book, e-learning has grown to account for at least 40% of all training delivery media. However, digital courses often fail to reach their potential for learning effectiveness and efficiency. This guide provides research-based guidelines on how best to present content with text, graphics, and audio as well as the conditions under which those guidelines are most effective. This updated fourth edition describes the guidelines, psychology, and applications for ways to improve learning through personalization techniques, coherence, animations, and a new chapter on evidence-based game design. The chapter on the Cognitive Theory of Multimedia Learning introduces three forms of cognitive load which are revisited throughout each chapter as the psychological basis for chapter principles. A new chapter on engagement in learning lays the groundwork for in-depth reviews of how to leverage worked examples, practice, online collaboration, and learner control to optimize learning. The updated instructor's materials include a syllabus, assignments, storyboard projects, and test items that you can adapt to your own course schedule and students. Co-authored by the most productive instructional research scientist in the world, Dr. Richard E. Mayer, this book distills copious e-learning research into a practical manual for improving learning through optimal design and delivery. Get up to date on the latest e-learning research Adopt best practices for communicating information effectively Use evidence-based techniques to engage your learners Replace popular instructional ideas, such as learning styles with evidence-based guidelines Apply evidence-based design techniques to optimize learning games e-Learning continues to grow as an alternative or adjunct to the classroom, and correspondingly, has become a focus among researchers in learning-related fields. New findings from research laboratories can inform the design and development of e-learning. However, much of this research published in technical journals is inaccessible to those who actually design e-learning material. By collecting the latest evidence into a single volume and translating the theoretical into the practical, e-Learning and the Science of Instruction has become an essential resource for consumers and designers of multimedia learning.

The long-awaited new edition of NAEYC's book *Developmentally Appropriate Practice in Early Childhood Programs* is here, fully revised and updated! Since the first edition in 1987, it has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional, developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development, and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children's optimal learning and development through a strengths-based approach to joyful, engaged learning. As educators make decisions to support each child's learning and development, they consider what they know about (1) commonality in children's development and learning, (2) each child as an individual (within the context of their family and community), and (3) everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole. This latest edition of the book is fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context. Building on each child's strengths, educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.
