There are many books about shooting Compound and Recurve bows but no book deals with the specific problems of the BAREBOW archer, as this book does. It presents a systematic, biomechanically efficient BAREBOW technique. A starting point to help you decide how you shoot and settle on your own shooting style, it will still serve as your guide for many years of competitive and enjoyable archery. Archery is a performance sport, no matter how good your aim if you fail in the shot execution, you miss. The shooting process is what makes you accurate and a biomechanically efficient BAREBOW technique will make this easier. The techniques described in this book are relevant to any barebow or traditional archer, not just Stringwalkers. Correct use of muscles, joints, and bones is needed to ensure energy is not wasted. This requires good alignment, proper use of archer's back muscles, and the transfer of the archer's effort into the back before allowing expansion to happen naturally. This book explains how to achieve this and details training methods and tools, including some notes for those participating in 3D and Field Archery.Target Panic is the most overlooked problem of BAREBOW archery. It is vital to know how to prevent it. The essential mental control is integrated throughout the description of the shooting process. Once you already have it, you have only two options: to conquer it or to suffer from it for the rest of your archery life. Consequently, Target Panic is addressed in depth. The module devoted to the mental side of BAREBOW archery includes an explanation of Target Panic and presents methods to reassert control and overcome it. The mental systems used to learn how to prepare yourself for competition and then perform under pressure are also explained.NOTE: This book does not set out to teach the very basics of how to shoot a bow. It is advisable to learn the early steps of shooting a bow under the supervision of a competent coach.

It's the ultimate introduction to the world of archery, in a book that turns into an actual bow that shoots paper arrows. All you have to do is unlock and open the upper and lower bow limbs, punch out and fold the arrows, and shoot! But the book is also a rich and lively illustrated history of archery, covering the physics of a bow and arrow; the types of bows used since 4500 BC; arrows from around the world, like the deadly stone arrowheads used by Native Americans, or the Japanese whistling Kabura-ya that helped Samurai signal each other. Here are the great archery battles—Thermopylae in 480 BC, where the Spartan "300" faced a Persian who shot so many arrows they darkened the sky; or the Battle of Leipzig in 1813, the last battle to feature archers—horsemen from the Eurasian steppes—who helped the Russians defeat Napoleon.

Written by an acknowledged expert, this invaluable book is aimed at archers of all levels, from those starting out in the sport to those taking part in competitions at the highest level. The author analyses shooting techniques and tuning, and also emphasizes the development of mental toughness; he argues that this goes hand in hand with the mastery of the physical aspects of the sport. This comprehensive guide to shooting covers: how to get started in archery, the costs involved, choosing and using equipment and the basics of shooting; setting up your equipment and initial tuning; the biomechanics of shooting; the tactics and preparation work involved in archery competitions; physical fitness, nutrition and psychology; arrow selection and preparation; making bowstrings; shooting techniques, improving performance and the fine-tuning of equipment.
