Formulaic Sequences

The Pre-intermediate Choice

Formulaic sequences (FS) are now recognized as an essential element of language use. However, research on FS has generally been limited to a focus on description, or on the place of FS in L1 acquisition. This volume opens new directions in FS research, concentrating on how FS are acquired and processed by the mind, both in the L1 and L2. The ten original studies in the volume illustrate the L2 acquisition of FS, the relationship between L1 and L2 FS, the relationship between corpus recurrence of FS and their psycholinguistic reality, the processes involved in reading FS, and pedagogical issues in teaching FS. The studies use a wide range of methodologies, many of them innovative, and thus the volume serves as a model for future research in the area. The volume begins with three survey chapters offering a background on the characteristics and measurement of FS.

BIM (Building Information Modelling) is transforming working practices across the built environment sector, as clients, professionals, contractors and manufacturers throughout the supply chain grasp the opportunities that BIM presents. The first book ever to focus on the implementation of BIM processes in landscape and external works, BIM for Landscape will help landscape professionals understand what BIM means for them. This book is intended to equip landscape practitioners and practices to meet the challenges and reap the rewards of working in a BIM environment - and to help professionals in related fields to understand how BIM processes can be brought into landscape projects. BIM offers significant benefits to the landscape profession, and heralds a new chapter in inter-disciplinary relationships. BIM for Landscape shows how BIM can enhance collaboration with other professionals and clients, streamline information processes, improve decision-making and deliver well-designed landscape projects that are right first time, on schedule and on budget. This book looks at the organisational, technological and professional practice implications of BIM adoption. It discusses in detail the standards, structures and information processes that form BIM Level 2-compliant workflows, highlighting the role of the landscape professional within the new ways of working that BIM entails. It also looks in depth at the digital tools used in BIM projects, emphasising the 'information' in Building Information Modelling, and the possibilities that data-rich models offer in landscape design, maintenance and management. BIM for Landscape will be an essential companion to the landscape professional at any stage of their BIM journey.

In this controversial essay, Carlos El í as addresses the worldwide phenomenon that is threatening the scientific and economic progress of Western countries. The rise and influence of magic and irrationality in the media, in social networks and at universities is a disturbing phenomenon: many Western students no longer want to pursue STEM (Science, Technologies, Engineering, and Math) careers. This lucid and well-written book addresses one of the key issues of public debate: the deteriorating state of science in Western countries and their governments, and its rise in Asian countries. The author compares two distinct models: the Spanish or Latin model, which closed the door on science with the Counter-Reformation, and that employed by a second group of countries where science was encouraged. El í as suggests that a similar development could now be taking place between Western countries (where the press, television and social science academics are becoming increasingly critical towards science) and Asia, where most prime ministers (and other politicians) are scientists or engineers. This book is intended for STEM educators (both at secondary schools and universities), scientists and academics interested in scientific culture in the era of fake news.

Crime and punishment, criminal law and its administration, are areas of ancient history that have been explored less than many other aspects of ancient civilizations. Throughout history women have been affected by crime both as victims and as offenders. Yet, in the ancient world customary laws were created by men, formal laws were written by men, and both were interpreted and enforced by men.

The quintessential resource on the important topic of curriculum integration! Going well beyond other books on this subject, James Beane details the history of curriculum integration and analyzes current critiques to provide a complete theory of curriculum integration. He defines curriculum integration as a comprehensive approach rather than simply "rearranging subjects." Using many classroom examples, he explains the relationship between curriculum integration and the disciplines of knowledge. The approach set forth in this groundbreaking volume translates into a democratic vision of general education that transcends the current standards movement. "Offers clear and understandable examples of what curriculum integration means, how it can work, and how it fits a model of democratic education." –Choice "In this time of conservative attacks on progressive education, it is crucial that we defend and extend democratic policies and practices. James Beane has been one of the most important figures in articulating democratic possibilities in schools. Curriculum Integration shows why he so deserves our respect. It provides a clear and insightful picture of the arguments and realities of democratic curriculum development and teaching." –Michael W. Apple, University of Wisconsin–Madison "Jim Beane urges us to completely rethink how we pursue intellectual inquiry, as well as who makes the decisions in the classroom and what our ultimate goals are. Taken seriously, as it ought to be, [his] approach could revolutionize American education." –Alfie Kohn, author of Punished by Rewards and Beyond Discipline "Beane writes directly with a passion that reflects long-in-the-making and deeply rooted convictions about education, youth, and democracy... This book is a critically important resource . . . and it will remain so for years to come." –John H. Lounsbury, National Middle School Association
