Fifth Edition" is the core  
of the Martini.

The following notes are  
by no means intended as  
a rule of thought by  
which nurses can teach  
themselves to nurse, still  
less as a manual to teach  
nurses to nurse. They  
are meant simply to give  
hints for thought to  
women who have  
personal charge of the

health of others. Every woman, or at least almost every woman, in England has, at one time or another of her life, charge of the personal health of somebody, whether child or invalid, -in other words, every woman is a nurse. Every day sanitary knowledge, or the knowledge of nursing, or in other

words, of how to put the constitution in such a state as that it will have no disease, or that it can recover from disease, takes a higher place. It is recognized as the knowledge which every one ought to have—distinct from medical knowledge, which only a profession can have. If, then, every woman must at some time or other of

her life, become a nurse,  
i.e., have charge of  
somebody's health, how  
immense and how  
valuable would be the  
produce of her united  
experience if every  
woman would think  
how to nurse. I do not  
pretend to teach her  
how, I ask her to teach  
herself, and for this  
purpose I venture to  
give her some hints

This book aims to clarify the potential association between frailty and cardiovascular disease in older people. Covering the biological as well as the clinical point of view, it allows researchers and

Tommaso  
clinicians to discover  
the significance of this  
topic. The  
contributions cover  
the most important  
aspects in the  
potential relationship  
between frailty and  
cardiovascular  
disease. In particular,  
authoritative authors  
in this field have  
clarified the definition  
and the epidemiology

of frailty and cardiovascular disease in older people. A large part of the volume is dedicated to the biological mechanisms of frailty and cardiovascular disease, trying to find those in common between these two conditions. Since this book is dedicated to

both researchers and clinicians, we have proposed some chapters to the importance of comprehensive geriatric assessment in the evaluation and treatment of cardiovascular diseases and frailty. In this regard, the importance of geriatric evaluation in cardiac

surgery for older people is well covered. Finally, the importance of cardiac rehabilitation and physical exercise is summarized, being, actually, the most important treatments for both frailty and cardiovascular disease. Written by many well-known and widely published

experts in their  
respective fields, this  
book will appeal to a  
wide readership such  
as researchers in the  
field and clinicians,  
especially suited in  
geriatric medicine and  
cardiology who, every  
day, face frail older  
patients.
