The historic quest to rekindle the human exploration and colonization of space led by two rivals and their vast fortunes, egos, and visions of space as the next entrepreneurial frontier *The Space Barons* is the story of a group of billionaire entrepreneurs who are pouring their fortunes into the epic resurrection of the American space program. Nearly a half-century after Neil Armstrong walked on the moon, these Space Barons—most notably Elon Musk and Jeff Bezos, along with Richard Branson and Paul Allen—are using Silicon Valley-style innovation to dramatically lower the cost of space travel, and send humans even further than NASA has gone. These entrepreneurs have founded some of the biggest brands in the world—Amazon, Microsoft, Virgin, Tesla, PayPal—and upended industry after industry. Now they are pursuing the biggest disruption of all: space. Based on years of reporting and exclusive interviews with all four billionaires, this authoritative account is a dramatic tale of risk and high adventure, the birth of a new Space Age, fueled by some of the world's richest men as they struggle to end governments' monopoly on the cosmos. *The Space Barons* is also a story of rivalry—hard-charging startups warring with established contractors, and the personal clashes of the leaders of this new space movement, particularly Musk and Bezos, as they aim for the moon and Mars and beyond.

Each year Americans take more than 300 million plane trips staffed by a total of some 70,000 flight attendants. The health and safety of these individuals are the focus of this volume from the Committee on Airliner Cabin Air Quality. The book examines such topics as cabin air quality, the health effects of reduced pressure and cosmic radiation, emergency procedures, regulations established by U.S. and foreign agencies, records on airline maintenance and operation procedures, and medical statistics on air travel. Numerous recommendations are presented, including a ban on smoking on all domestic commercial flights to lessen discomfort to passengers and crew, to eliminate the possibility of fire caused by cigarettes, and to bring the cabin air quality into line with established standards for other closed environments.

The main goal of this study was to develop a strategy for monitoring environmental effects at a single exploratory offshore well on the east coast. Work carried out in the study consisted of consultations with scientists, regulators, & stakeholders; reviews of regulatory regimes; toxicity results relevant to exploratory activities; and development of a decision tree for determining when & how to conduct environmental effects monitoring (EEM). The study report first

presents background on potential issues related to the environmental impacts of exploratory drilling, the characteristics of typical exploratory drill rigs & drilling muds, the regulatory regime in Canada & elsewhere, and the biological & other effects of drilling. It then summarizes EEM programs & their results for exploratory wells on the Scotian Shelf & Grand Banks; outlines EEM issues of concern for the Newfoundland & Nova Scotia offshore, and discusses issue similarities & differences between the two areas; and draws brief conclusions on the application of production EEM experience to exploratory drilling EEM. Finally, an EEM decision process based on three scenarios appropriate to the east coast is presented, along with recommended study designs to address the scenarios.

In the past decades, traditional television broadcasting has been an autonomous field which was largely independent of the world of telecommunications and computers. The analog television standards PAL, SECAM and NTSC have remained almost untouched with regard to their picture information. Whatever development took place was essentially in support of programming and was

based on the existence of a certain redundancy in the representation of the signal in the time and frequency domain. In the 70S, for example, the teletext system was introduced throughout Europe. A further supplementary digital service in television, introduced in the early 80S, was the Video Programme System (VPS) which utilizes part of the TV data line and ensures that programmes can be recorded with the correct timing on video recorders even when the programmes are delayed. There is no doubt that as far as the transmission from the studio to the viewer is concerned, the future belongs to digital video broadcasting (DVB) which is about to be implemented in the satellite, cable and terrestrial radio transmission media. The European DVB Project finalized its specification for channel coding and modulation for the digital broadband transmission channels at the beginning of 1996. The safety of vehicle traffic depends on how well automotive lighting supports the visual perception of the driver. This book explains the fundamentals of visual perception, like e.g. physiology of eye and brain, as well as those of automotive lighting technology, like e.g. design of headlamps and signal lights. It is an interdisciplinary approach to a rapidly evolving field of science and technology written by a team of authors who are experts in their fields.

"America's Digital Army is an ethnographic study of the link between interactive entertainment and military power, drawing on Robertson Allen's fieldwork observing video game developers, military strategists, U.S. Army marketing agencies, and an array of defense contracting companies that worked to produce the official U.S. Army video game, America's Army. Allen uncovers the methods by which gaming technologies such as America's Army, with military funding and themes, engage in a militarization of American society that constructs everyone, even nonplayers of games, as virtual soldiers available for deployment. America's Digital Army examines the army's desire for "talented" soldiers capable of high-tech work; beliefs about America's enemies as reflected in the game's virtual combatants; tensions over best practices in military recruiting; and the sometimes overlapping cultures of gamers, game developers, and soldiers. Allen reveals how binary categorizations such as soldier versus civilian, war versus game, work versus play, and virtual versus real become blurred--if not broken down entirely--through games and interactive media that reflect the U.S. military's ludic imagination of future wars, enemies, and soldiers."--

Why the gender gap persists and how we can close it. For years women have made up the majority of college-educated workers in the United States. In 2019, the gap between the percentage of women and the percentage of men in the workforce was the smallest on record. But despite these statistics, women remain underrepresented in positions of power and status, with the highest-paying jobs the most gender-imbalanced. Even in fields where the numbers of men and women are roughly equal, or where women actually make up the majority, leadership ranks remain male-dominated. The persistence of these inequalities begs the question: Why haven't we made more progress? In *Glass Half-Broken*, Colleen Ammerman and Boris Groysberg reveal the pervasive organizational obstacles and managerial actions—limited opportunities for development, lack of role models and sponsors, and bias in hiring, compensation, and promotion—that create gender imbalances. Bringing to light the key findings from the latest research in psychology, sociology, organizational behavior, and economics, Ammerman and Groysberg show that throughout their careers—from entry-level to mid-level to senior-

level positions—women get pushed out of the leadership pipeline, each time for different reasons. Presenting organizational and managerial strategies designed to weaken and ultimately break down these barriers, Glass Half-Broken is the authoritative resource that managers and leaders at all levels can use to finally shatter the glass ceiling.
