#1 NEW YORK TIMES BEST SELLER • The epic story of the greatest quest in all of science—the holy grail of physics that would explain the creation of the universe—from renowned theoretical physicist and author of *The Future of the Mind* and *The Future of Humanity* When Newton discovered the law of gravity, he unified the rules governing the heavens and the Earth. Since then, physicists have been placing new forces into ever-grander theories. But perhaps the ultimate challenge is achieving a monumental synthesis of the two remaining theories—relativity and the quantum theory. This would be the crowning achievement of science, a profound merging of all the forces of nature into one beautiful, magnificent equation to unlock the deepest mysteries in science: What happened before the Big Bang? What lies on the other side of a black hole? Are there other universes and dimensions? Is time travel possible? Why are we here? Kaku also explains the intense controversy swirling around this theory, with Nobel laureates taking opposite sides on this vital question. It is a captivating, gripping story; what's at stake is nothing less than our conception of the universe. Written with Kaku's trademark enthusiasm and clarity, this epic and engaging journey is the story of *The God Equation*.

Violence is a central issue of contemporary society at all levels, affecting human relationships from the most intimate to the most impersonal. But what is violence? Is violence justifiable? What relevance does the fate of the victim of violence have to such questions? To address these and similar questions, this volume brings together thinkers from a wide range of philosophical backgrounds who employ a rich variety of methods, ranging from the strictly analytic to the postmodern. They explore issues such as responsibility, provocation, violation, cruelty, self-determination and deception in attempting to understand violence in relation both to the suffering of its victims and the justifications offered by its perpetrators and their supporters. In exploring these issues the essays collected in this volume explore terrorism, rape, genocide and state-sponsored violence.

John Irish and Barbara Ozuna, both experienced history teachers, have teamed up to develop this workbook to focus on the historical thinking skills that high school students in the AP World History course must master in order to perform well on the exam.*

In recent years, the academy has undergone significant changes: a more competitive and volatile job market has led to widespread precarity, teaching and service loads have become more burdensome, and higher education is becoming increasingly corporatized. In this revised and expanded edition of *The Academic's Handbook*, more than fifty contributors from a wide range of disciplines and backgrounds offer practical advice for academics at every career stage, whether they are first entering the job market or negotiating the post-tenure challenges of leadership and administrative roles. Contributors affirm what is exciting and fulfilling about academic work while advising readers about how to set and protect boundaries around their energy and labor. In addition, the contributors tackle topics such as debates regarding technology, social media, and free speech on campus; publishing and grant writing; attending to the many kinds of diversity among students, staff, and faculty; and how to balance work and personal responsibilities. The authors argue in this book that social theory can usefully be conceived in terms of four broad paradigms, based upon different sets of meta-theoretical assumptions with regard to the nature of social science and the nature of society. The four paradigms - Functionalist, Interpretive, Radical Humanist and Radical Structuralist - derive from quite distinct intellectual traditions, and present four mutually exclusive views of the social work. Each stands in its own right, and generates its own distinctive approach to the analysis of social life. The authors provide extensive reviews of the four paradigms, tracing the evolution and inter-relationships between the various sociological schools of thought within each. They then proceed to relate theories of organisation to this wider background. This book covers a great range of intellectual territory. It makes a number of important contributions to our understanding of sociology and organisational analysis, and will prove an invaluable guide to theorists, researchers and students in a variety of social science disciplines. It stands as a discourse in social theory, drawing upon the general area of organisation studies - industrial sociology, organisation theory, organisational psychology, and industrial relations - as a means of illustrating more general sociological themes. In addition to reviewing and evaluating existing work, it provides a framework for appraising future developments in the area of organisational analysis, and suggests the form which some of these developments are likely to take.

From the critically acclaimed and bestselling author David Maraniss, a groundbreaking book that weaves sports, politics, and history into a

tour de force about the 1960 Rome Olympics, eighteen days of theater, suspense, victory, and defeat David Maraniss draws compelling portraits of the athletes competing in Rome, including some of the most honored in Olympic history: decathlete Rafer Johnson, sprinter Wilma Rudolph, Ethiopian marathoner Abebe Bikila, and Louisville boxer Cassius Clay, who at eighteen seized the world stage for the first time, four years before he became Muhammad Ali. Along with these unforgettable characters and dramatic contests, there was a deeper meaning to those late-summer days at the dawn of the sixties. Change was apparent everywhere. The world as we know it was coming into view. Rome saw the first doping scandal, the first commercially televised Summer Games, the first athlete paid for wearing a certain brand of shoes. Old-boy notions of Olympic amateurism were crumbling and could never be taken seriously again. In the heat of the cold war, the city teemed with spies and rumors of defections. Every move was judged for its propaganda value. East and West Germans competed as a unified team less than a year before the Berlin Wall. There was dispute over the two Chinas. An independence movement was sweeping sub-Saharan Africa, with fourteen nations in the process of being born. There was increasing pressure to provide equal rights for blacks and women as they emerged from generations of discrimination. Using the meticulous research and sweeping narrative style that have become his trademark, Maraniss reveals the rich palate of character, competition, and meaning that gave Rome 1960 its singular essence.

One of the greatest challenges in education today is to adapt and respond to a linguistically and culturally diverse world, and to combat social disintegration and discrimination. Participatory and collaborative action research represents an empowering and emancipatory approach to this challenge because the target groups become involved as equal partners. This book provides guidance for trainers of youth and adult educators and for those who manage non-formal education and curriculum development programs in youth and adult literacy. It is also aimed at publishers and authors who want to improve their services and products by collaborating more closely with their readerships.

This book lays the groundwork for the future of global citizenship, and it discusses where we are now, where to go from here, and how all of this fits into a lifelong learning context. It incorporates case studies, meta-narratives, and empirical studies to support cosmopolitanism through a lifelong learning lens and is a must read for educators, activists, non-governmental organizations, civil society, and community organizations. The framing for this book is with the United Nations Sustainable Development Goal 4 in mind: ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all, with the intent that all learners will acquire the knowledge, skills, and attitudes necessary to promote “sustainable lifestyles, human rights, gender equality, promotion of a culture of peace and non-violence, global citizenship and appreciation of cultural diversity and of culture’s contribution to sustainable development” (UN Sustainable Development Goal, target 4.7). It is through this lens that this book showcases the work of researchers, practitioners, civil society, and thought leaders in global citizenship for lifelong learning. While this tension between nationalism and cosmopolitanism exists, the wheels of globalization still turn and shape our local, national, and global connections. Through this exploration, this book lifts up examples of global citizenship education done well, across the age spectrum, and in a variety of contexts. The binding factor is the core values, ethics, and moral structure of a world in collaboration toward its larger human and ecological thriving. It unpacks complex topics such as ethical and cultural relativism, accountability and responsibility in a global world, decolonial education and unmaking ideas of “development”, and ethical models for community-based global learning and engagement. What voices are missing in the discussion of global learning and global citizenship education?

"To an astonishing extent, the 1920s resemble our own era, at the turn of the twenty-first century; in many ways that decade was a precursor of modern excesses....Much of what we consider contemporary actually began in the Twenties." -- from the Introduction The images of the 1920s have been indelibly imprinted on the American imagination: jazz, bootleggers, flappers, talkies, the Model T Ford, Babe Ruth, Charles Lindbergh's history-making flight over the Atlantic. But it was also the era of the hard-won vote for women, racial injustice, censorship, widespread social conflict, and the birth of organized crime. Bookended by the easy living of the Jazz Age, when the booze and money flowed seemingly

without end, and the crash of '29 that led to breadlines and a level of human suffering not seen since World War I, *New World Coming* is a lively, entertaining, and all-encompassing chronological account of an age that defined America. Chronicling what he views as the most consequential decade of the past century, Nathan Miller -- an award-winning journalist and five-time Pulitzer nominee -- paints a vivid portrait of the 1920s, focusing on the men and women who shaped that extraordinary time, including, ironically, three of America's most conservative presidents: Harding, Coolidge, and Hoover. In the Twenties, the American people soared higher and fell lower than they ever had before. As unprecedented economic prosperity and sweeping social change dazzled the public, the sensibilities and restrictions of the nineteenth century vanished, and many of the institutions, ideas, and preoccupations of our own age emerged. With scandal, sex, and crime the lifeblood of the tabloids, the contemporary culture of celebrity and sensationalism took root and journalism became popular entertainment. By discarding Victorian idealism and embracing twentieth-century skepticism, America became, for the first time, thoroughly modernized. There is hardly a dimension of our present world, from government to popular culture, that doesn't trace its roots to the 1920s, and few decades are more intriguing or significant today. The first comprehensive view of the era since *Only Yesterday*, Frederick Lewis Allen's 1931 classic, *New World Coming* reveals this remarkable age from the vantage point of nearly a century later. It's all here -- the images and the icons, the celebrities and the legends -- in a book that will resonate with history readers, 1920s aficionados, and Americans everywhere.

A new edition of the best-known book critiquing the U.S. electoral college In this third edition of the definitive book on the unique system by which Americans choose a president—and why that system should be changed—George Edwards includes a new chapter focusing on the 2016 election. “As the U.S. hurtles toward yet another election in which the popular vote loser may become president, Edwards’s book is essential reading. It clearly and methodically punctures myths about the Electoral College’s benefits.”—Richard L. Hasen, author of *The Voting Wars* “Supported by both history and data, George Edwards convincingly argues the Electoral College is anti-‘democratic, anti-‘equality, and anti-‘common sense. We should dismantle it, and soon.”—Kent Greenfield, author of *Corporations Are People Too (And They Should Act Like It)*

Alan Rogers looks at learning (formal, nonformal and informal) and examines the hidden world of informal (unconscious, unplanned) learning. He points out the importance of informal learning for creating tacit attitudes and values, knowledge and skills which influence (conscious, planned) learning – formal and non-formal. Moreover, he explores the implications of informal learning for educational planners and teachers in the context of lifelong learning. While mainly aimed at adult educators, the book’s arguments apply also to schooling and higher education, in both industrialised societies and developing countries where large numbers of children and adults are not and have not been in school and so rely on informal learning to manage change.
