Edward Eggleston (December 10, 1837 - September 3, 1902) was an American historian and novelist. Eggleston was born in Vevay, Indiana, to Joseph Cary Eggleston and Mary Jane Craig. The author George Cary Eggleston was his brother. As a child, he was too ill to regularly attend school, so his education was primarily provided by his father. He was ordained as a Methodist minister in 1856. He wrote a number of tales, some of which, especially the “Hoosier” series, attracted much attention. Among these are The Hoosier Schoolmaster, The Hoosier Schoolboy, The End of the World, The Faith Doctor, and Queer Stories for Boys and Girls. Eggleston was elected a member of the American Antiquarian Society in 1893. His boyhood home at Vevay, known as the Edward and George Cary Eggleston House, was listed on the National Register of Historic Places in 1973. His summer home, Owl’s Nest, in Lake George, New York, eventually became his year-round home. Eggleston died there in 1902, at the age of 64. Owl’s Nest was declared a National Historic Landmark in 1971. His daughter, the writer, Elizabeth Eggleston Seelye, was married to Eliwyn Seelye, the founder of the New York State Historical Association. (wikipedia.org)

In the first installment of the A Fire Beneath the Skin trilogy, the city of Kiasar has never fallen. No enemy has ever made it across the Long Bridge or penetrated the city’s mighty walls. Even when a powerful invading army shows up at the gates, the duke and his daughter, Rina Vesaiin, are certain that it poses little threat. But they are cruelly betrayed from within and, in a horrific spasm of violence, the city is brought to its knees. With the help of her bodyguard, Kork, the battle-trained young Rina narrowly escapes the slaughter and makes her way to the lair of an ancient sorcerer—the Ink Mage—who gifts her with a strange, beautiful set of magical tattoos. Now a duchess in exile, Rina sets out on a quest to reclaim what is rightfully hers, aided by a motley assortment of followers who will help her in her cause—some for noble reasons and others for their own dark purposes. With the enemy’s agents nipping at her heels, Rina must learn to harness her new and startling magical powers if she is to assert her rightful place as ruler of Kiasar.

Appropriate for all basic-to-intermediate level courses in Visual Basic 2008 programming. Created by world-renowned programming instructors Paul and Harvey Deitel, Visual Basic 2008 How to Program, Fourth Edition introduces all facets of the Visual Basic 2008 language hands-on, through hundreds of working programs. This book has been thoroughly updated to reflect the major innovations Microsoft has incorporated in Visual Basic 2008 and .NET 3.5; all discussions and sample code have been carefully audited against the newest Visual Basic language specification. The many new platform features covered in depth in this edition include: LINQ data queries, Windows Presentation Foundation (WPF), ASP.NET Ajax and the Microsoft Ajax Library, Silverlight-based rich Internet application development, and creating Web services with Windows Communication Foundation (WCF). New language features introduced in this edition: object anonymous types, object initializers, implicitly typed local variables and arrays, delegates, lambda expressions, and extension methods. Students begin by getting comfortable with the free Visual Basic Express 2008 IDE and basic VB syntax included on the CD. Next, they build their skills one step at a time, mastering control structures, classes, objects, methods, variables, arrays, and the core techniques of object-oriented programming. With this strong foundation in place, the Deitels introduce more sophisticated techniques, including inheritance, polymorphism, exception handling, strings, GUI's, data structures, generics, and collections. Throughout, the authors show developers how to make the most of Microsoft's Visual Studio tools. A series of appendices provide essential programming reference material on topics ranging from number systems to the Visual Studio Debugger, UML 2 to Unicode and ASCII.
