

Us 1 Paper

American by Paper reveals how two groups of immigrants who share a primary language nevertheless have very different experiences of literacy in the United States. It describes the social realities facing documented and undocumented immigrants who use everyday acts of writing to negotiate papers--the visas, green cards, and passports that promise access to the American Dream. It is both an ethnography, filled with illuminating details about contemporary immigrant lives, and a critical intervention into two leading--and conflicting--scholarly ideas of literacy and its social role. Although popular thinking and scholarship have viewed literacy as a method of culturally assimilating immigrants into the nation, Kate Vieira finds that upward mobility and social inclusion in the United States are tied to literacy in complex ways. She draws from extensive interviews with Portuguese-speaking migrants who live and work together in a former mill town in Massachusetts that she calls South Mills: one group from the Azores, who are usually documented, and another from Brazil, who are usually undocumented. She explains how these migrants experience literacy not as a vehicle for assimilation (as educational policy makers often assert) nor as a means of resisting oppression (as literacy scholars often hope) but instead as tied up in papers, particularly in the papers that confer legal status. Papers and literacy are inextricably bound together, both promoting and constraining opportunities, and they shape why and how migrants read and write. Vieira builds on insights from literacy theories that have long been in opposition to each other in order to develop a new sociomaterial theory of literacy, one that takes into account its inseparable link to paper, forms, and documentation. This point of view leads to a deeper understanding of how literacy actually accrues meaning by circulating, and recirculating, through institutions and the lives of individuals.

Excerpt from Bombproof, Vol. 1: A Weekly Paper Devoted to the Interests of U. S. Army General Hospital No. 18; Dec. 21, 1918 Food is any substance which, when taken into the body will build - repair the tissues - furnish heat and energy. The human body contains many chemical elements in varying amounts such as nitrogen, hydrogen, carbon oxygen and other minerals. Food must contain the same elements that are found in the body if it is to build and repair the body structure. But no one food contains all these elements in proper proportion for all persons, thus it is by combination of various food, that we produce a suitable diet. These elements must also be supplied in forms which the body can use. It cannot utilize carbon in the form of coal but this must be combined with hydrogen and oxygen. These combinations of elements found in nature are usually called protein. Fat, carbohydrate mineral matter and water.
