The open source nature of the platform has not only established a new direction for the industry, but enables a developer or forensic analyst to understand the device at the most fundamental level. Android Forensics covers an open source mobile device platform based on the Linux 2.6 kernel and managed by the Open Handset Alliance. The Android platform is a major source of digital forensic investigation and analysis. This book provides a thorough review of the Android platform including supported hardware devices, the structure of the Android development project and implementation of core services (wireless communication, data storage and other low-level functions). Finally, it will focus on teaching readers how to apply actual forensic techniques to recover data. Ability to forensically acquire Android devices using the techniques outlined in the book Detailed information about Android applications needed for forensics investigations Important information about SQLite, a file based structured data storage relevant for both Android and many other platforms.

Microprocessor Data Book, Second Edition focuses on the available types of microprocessors and microcomputers, including description of internal architecture, instruction set, main electrical data, and package details of these instruments. The book first elaborates on 4-bit and 8-bit microprocessors and microcomputers. Discussions focus on Advanced Micro Devices Am2900 series, Hitachi HMCS40 series, Motorola MC6801 and MC6803, Motorola MC6809 series, Rockwell R6500/1 series, and RCA 1800 series. The text then examines 16-bit and 32-bit microprocessors and microcomputers. Topics include Intel 80286 microprocessor, Motorola 68010, Texas Instruments TMS9980, Zilog Z8000 series, Motorola 68020 processor, and National 32032. The manuscript takes a look at other support devices, peripheral device controllers, and serial I/O devices, including Motorola MC6850 ACIA, Texas Instruments TMS9902 ACC, Thomson EFCIS EF9365/6, and floppy disk controllers. The publication is a valuable source of information for computer science experts and researchers interested in microprocessors and microcomputers.

If you are involved with machining or metalworking or you specify materials for industrial components, this book is an absolute must. It gives you detailed and comprehensive information about the selection, processing, and properties of materials for machining and metalworking applications. They include wrought and powder metallurgy tool steels, cobalt base alloys, cemented carbides, cermets, ceramics, and ultra-hard materials. You'll find specific guidelines for optimizing machining productivity through the proper selection of cutting tool materials plus expanded coverage on the use of coatings to extend cutting tool and die life. There is also valuable information on alternative heat treatments for improving the toughness of tool and die steels. All new material on the correlation of heat treatment microstructures and properties of tool steels is supplemented with dozens of photomicrographs. Information on special tooling considerations for demanding applications such as isothermal forging, die casting of metal matrix composites, and molding of corrosive plastics is also included. And you'll learn about alternatives to ferrous materials for metalworking applications such as carbides, cermets, ceramics, and nonferrous metals like aluminum, nickel, and copper base alloys.

Competition Law and Policy in the EU and UK provides a focused guide to the main provisions and policies at issue in the EU and UK, including topics such as enforcement, abuse of dominance, anti-competitive agreements, cartels, mergers, and market investigations. The book's contents are tailored to cover all major topics in competition law teaching, and the authors' clear and accessible writing style offers an engaging and easy to follow overview of the subject for course use. The fifth edition provides a full update for this well-established title, presenting and contextualising the impact of key cases, as well as changes to enforcement practice, and at a legislative and institutional level. There are new, separate chapters in this edition on private enforcement and UK market investigations to reflect the increasing significance of these key areas of competition law practice. Competition Law and Policy in the EU and UK integrates useful pedagogical features to help clarify topics and reinforce important points: chapter overviews and summaries highlight the key points to take away from each chapter to structure student learning discussion questions facilitate self-testing and seminar discussions of the major issues covered in each chapter, to help reinforce understanding of these topics further reading lists additional resources in order to guide research and develop subject knowledge a new glossary provides succinct explanations of competition law terminology, ideal for those studying the topic for the first time Clear, focused and student-friendly, this title offers a comprehensive resource for students taking competition law courses, and is supported online by updates to the law offered on Angus MacCulloch's blog, Who's Competing (<http://whoscompeting.wordpress.com/>).

The European Union legal order

In recent years European Community (EC) competition law has come under fire. Continued criticism of all aspects of the means by which EC competition law is enforced has brought to light ineffectiveness of the present system. Consequently the European Commission has responded by issuing the "White Paper on Modernisation", which sets out its vision on the future of EC competition law. This new book takes a step back, and tries to understand the current challenges to EC competition policy by examining the origins of the Community's competition law system. In the first part of the book the author sketches the development of Community competition law enforcement between the European Economic Community, established in 1958, and the European Union of today. Taking this dynamic perspective on EC competition law, the second part of the book addresses topical problems of EC competition policy; the pertinent objectives, the institutional framework, the division of jurisdiction between the Community and Member States, and decentralised enforcement of Community law. Notably, the author's conclusions diverge considerably from the analysis found in the Commission White Paper on Modernisation. The author proposes various alternative solutions to the existing problems which, arguably, fit better within the overall constitutional development of the Community than the solutions offered by the Commission. The book will be of interest to competition lawyers as well as to all those interested in the constitutional development of the European Community.

Rand McNally Vacation Guide, United States, Canada, Mexico

United States Code Annotated

Cumulative Edition, 1965-1969

This book is the fourth edition of a highly practical guide to the leading cases in European Competition Law. It explores the application of Article 101 TFEU, Article 102 TFEU and the European Merger Regulation, as well as the public and private enforcement of Competition Law. In addition, it reviews the intersection between Competition Law and Intellectual Property Rights and the application of Competition Law to State action. Each chapter outlines the relevant laws, regulations and guidelines for each topic. Within this framework, cases are reviewed in summary form, accompanied by analysis and commentary. "This book should be in the library of every competition law practitioner and academic. The summary of cases is first class. But what makes it really stand out is the quality of the commentary and the selection of the material which includes not only the most important European judgements and decision but also some of the leading cases from the US and European Member States." Ali Nikpay, Gibson, Dunn & Crutcher "The study of EU Competition law requires the analysis and understanding of a number of increasingly complex and lengthy European Commission and European Court decisions. Through the provision of case summaries, excerpts from the important passages and concise commentary linking these decisions to other key case law and Commission documents, this unique and impressive book provides the student and practitioner of EU competition law with an extremely clear and useful introduction to these leading decisions." Dr Kathryn McMahon, Associate Professor, School of Law, University of Warwick "The Guide is an invaluable tool for both students and practitioners. It provides a compact overview on the fundamental cases and highlights the essential problems in a clear and sharp analysis." Dr Christoph Voelk, Antitrust Practice Group, McDermott, Will & Emery LLP, Brussels "This edition will be especially valuable to competition law specialists abroad who are interested in the jurisprudence and policy of the European Union and its member states. Familiarity with the European regime is essential for proficiency in competition law today, and this volume provides an excellent foundation." William E Kovacic, Global Competition Professor of Law and Policy, George Washington University Law School, Former Chairman, US Federal Trade Commission "A perfect reference for students of competition law, giving them a kick start when searching for EU case law on a specific subject." Magnus Strand, University of Uppsala, Sweden

This book which focuses on Articles 81and 82 EC, is a concise, highly practical guide to the leading cases of European competition law.

The ISRM Suggested Methods for Rock Characterization, Testing and Monitoring: 2007-2014

This book is a collection of ISRM suggested methods for testing or measuring properties of rocks and rock masses both in the laboratory and in situ, as well as for monitoring the performance of rock engineering structures. The first collection (Yellow Book) has been published in 1981. In order to provide access to all the Suggested Methods in one volume, the ISRM Blue Book was published in 2007 (by the ISRM via the Turkish National Group) and contains the complete set of Suggested Methods from 1974 to 2006 inclusive. The papers in this most recent volume have been published during the last seven years in international journals, mainly in Rock Mechanics and Rock Engineering. They offer guidance for rock characterization procedures and laboratory and field testing and monitoring in rock engineering. These methods provide a definitive procedure for the identification, measurement and evaluation of one or more qualities, characteristics or properties of rocks or rock systems that produces a test result.
