Nomophobia - the fear of having our phones taken from us - is taking over our lives. The smart devices are in our homes, carried room-to-room as if glued to the hands of our family members. They meander into the bathroom, the laundry room, the shop, the garage, backyard and even into the bedroom where the adults once had their "alone time." Our teenage children require them to either be under their pillows, by their pillows or within arm's reach at a nightstand in order to even sleep at night. The cell phone must be visible for them to take tests at school without withdrawal anxiety. The phones travel where we do - school, the office, the gym, so that we are in constant contact with the virtual world - other people who also have no real lives outside of their phone. They are ringing in churches, movie theaters, restaurants, concerts, funerals. Nothing says "goodbye" to the recently departed like your ring tone from Metallica's Hardwired. Welcome to the world of smart phone addiction.

CompTIA IT Fundamentals (ITF+) Study Guide

Following on from the successful first edition (March 2012), this book gives a clear explanation of what LTE does and how it works. The content is expressed at a systems level, offering readers the opportunity to grasp the key factors that make LTE the hot topic amongst vendors and operators across the globe. The book assumes no more than a basic knowledge of mobile telecommunication systems, and the reader is not expected to have any previous knowledge of the complex mathematical operations that underpin LTE. This second edition introduces new material for the current state of the industry, such as the new features of LTE in Releases 11 and 12, notably coordinated multipoint transmission and proximity services; the main short- and long-term solutions for LTE voice calls, namely circuit switched fallback and the IP multimedia subsystem; and the evolution and current state of the LTE market. It also extends some of the material from the first edition, such as inter-operation with other technologies such as GSM, UMTS, wireless local area networks and cdma2000; additional features of LTE Advanced, notably heterogeneous networks and traffic offloading; data transport in the evolved packet core; coverage and capacity estimation for LTE; and a more rigorous treatment of modulation, demodulation and OFDMA. The author breaks down the system into logical blocks, by initially introducing the architecture of LTE, explaining the techniques used for radio transmission and reception and the overall operation of the system, and concluding with more specialized topics such as LTE voice calls and the later releases of the specifications. This methodical approach enables readers to move on to tackle the specifications and the more advanced texts with confidence.

This is not a book about what it's like to be old. It's about what it's like to have lived. There is no food quite like a grandmother's time-perfected dish. Inspired by their own grandmothers – and the love they shared through the food they served – Anastasia Miar and Iska Lupton embarked on a mission: from Corfu to Cuba, Moscow to New Orleans, and many more in between, they set out to capture cooking methods, regional recipes and timeless wisdom from grandmothers around the world. The result is Grand Dishes, a journey across four years of cooking with the world's grandmothers, a preservation not just of recipes but of the stories – told through the dishes – that have seasoned these grandmothers' lives. Featured alongside are contributions from celebrated chefs and food writers, each with their own grandmother's recipe to share. Rich with the insight that age brings, elegant portraits, diverse recipes, and techniques unique to a region, a grandmother and her family, this is a book to pass down through generations.
