A new generation steps up in the colonization and terraforming of Venus in the Nebula Award–winning author’s “masterful SF trilogy” (Publishers Weekly). The Venus Project calls upon the strongest and most courageous to create a prosperous world in the dismal wilderness of Venus. Those who demonstrate the skill and the passion to embark on this adventure must transform the barren planet in the midst of political and cultural unrest. When Risa and Benzi, children of Iris, one of the first people to partake in this project, find themselves in opposing forces on the battlefield, it is their love and perseverance that will determine the destiny of the new land.

Peripheral hormones have a major impact on the brain: they are able to interfere with its development, to affect release of neurotransmitters and concentrations of receptors, to trigger growth factors involved in lesion repair. These multiple actions account for their capacity to modulate a number of physiological parameters, from reproductive functions to memory, behavior and aging. This book based on contributions of pioneer investigators in the field, outlines the role of hormones in pathogenic processes such as mental disturbances or neurodegenerative diseases.

This comprehensive reference guide to ventilation systems provides up-to-date knowledge based on the experience of internationally-recognized experts to deal with current and future ventilation requirements in buildings. Presenting the most recent developments in ventilation research and its applications, this book covers the fundamentals as well as more advanced topics. With rigorous coverage for researchers and a practical edge for building professionals, Ventilation Systems is the one stop guide for the subject.

Infants, children and adolescents with congenital heart disease(CHD) are a challenge to manage and an ever-increasing number areaching adulthood. CHD is one of the most important topics in cardiology today, yetthis book is the only clinically-orientated monograph devotedexclusively to ventricular function and blood flow as it relates toCHD. Written by a distinguished panel of cardiologists, bioengineers,physiologists, and clinical investigators, Ventricular Functionand Blood Flow in Congenital Heart Disease is an extensive andcomprehensive presentation of the key aspects of this branch ofCHD.

A nightmarish series of events sweeps LAMP’s Sergeant Shane Scully and his wife (and boss), Alexa, into the vortex of an enormous, jurisdictional firestorm. First, a sheriff’s deputy, a friend of Shane’s, is gunned down while serving a routine search warrant. His fellow deputies blame the incident on the Bureau of Alcohol, Tobacco and Firearms, whom they angrily accuse of having failed to warn them that the suspect had a huge arsenal of illegal weapons in his house. Soon thereafter, a member of the ATF Situation Response Team is shot to death, followed by the sniper murder of the Sheriff’s Special Enforcement Bureau. At the request of the Mayor, LAMP, as an uninvolved and unbiased agency, assigns Shane Scully to investigate. He is given an impossible deadline to find a solution before these two elite and deadly SWAT Teams kill each other off amid a hurricane of horrible publicity. Shane pursues his investigation in a direction that neither his chief nor his wife agrees with, and succeeds in putting himself, his loved ones, and his career in terrible jeopardy before he finally discovers the shocking and deadly truth.

With the challenge complete and the corrupt Alpha of Coldspring defeated Fane is now free to complete the mate bond with Jacque and perform the Blood Rites. Although the challenge is done, the effects are far-reaching. Once it is known that Vasilé one of the strongest Alphas in the world is in America, specifically Coldspring, TX, there is one Alpha who cannot overlook the significance of this. An Alpha who happens to share Jacque’s DNA, but is this the one she needs to fear? With her mom driving and her two best friends, Jen and Sally in tow, Jacque set off for her happily ever after. She will soon realize a plan has been put in motion that will change her course and possibly tear her from Fane’s grasp forever. It will take a wolf pack, her mother’s love, her two best friend’s unrelenting determination, her own will to survive and the undying love of her mate to bring her home. The question remains, if she fights, if she endures, who will she be, what will be left once she is back in her mate’s arms?

The ocean and its inhabitants sketch and stretch our understandings of law in unexpected ways. Inspired by the blue turn in the social sciences and humanities, Blue Legalities explores how regulatory frameworks and governmental infrastructures are made, reworked, and contested in the oceans. Its interdisciplinary contributors analyze topics that range from militarization and Maori cosmologies to island building in the South China Sea and underwater robotics. Throughout, Blue Legalities illuminates the vast and unusual challenges associated with regulating the turbulent materialities and lives of the sea. Offering much more than an analysis of legal frameworks, the chapters in this volume show how the more-than-human ocean is central to the construction of terrestrial institutions and modes of governance. By thinking with the more-than-human ocean, Blue Legalities questions what we think we know—and what we don’t know—about oceans, our earthly planet, and ourselves. Contributors. Stacy Alaimo, Amy Braun, Irus Braverman, Holly Jean Buck, Jennifer L. Gaynor, Stefan Helmreich, Elizabeth R. It is 1958 and the Phelan clan has gathered to hear Peter Phelan’s will, read by the living Peter himself, an artist whose paintings about members of the family have given him belated critical recognition. The paintings illuminate the lives of his brother Francis (the exiled hero of Ironweed), and a family ancestor, Malachi McIlhenny, a true madman beset by demons, and determined to send them back to hell. Orson Purcell, bastard son of Peter, and half-mad himself, encounters his first true solace through this obsessive and close-knit family he has never quite entered; most especially through his Aunt Molly, whose intense love affair holds secrets that only another love can resurrect. It is through Orson’s modern eye that we see the tragedies, obsessions, and clandestine joys of this singular family. This is climatic work in William Kennedy’s

Albany Cycle, riding on the melody of its language and the power of its story, which is full of surprise, comedy, terror, and earthly delight.

Venous valves rank among the smallest and most delicate organs of the human and animal bodies – so why devote an entire book to them? We were induced to do so by several reasons. First of all we would point out the clinical significance of venous valves. In the pathogenesis of a

number of widespread diseases, such as varicose veins or the post-thrombotic syndrome, venous valves are involved as the underlying cause or at least a factor contributory to the symptoms. According to Taheri et al. these venous diseases occur ten times more frequently than arterial obliterations. Incompetence of venous valves also plays a causal role in varicocele, the most frequent cause of male infertility. But not only pathogenetic reasons induced us to write this book. In more recent times there has been a growing tendency to reconstruct functional valve disorders therapeutically; several surgical methods have been developed, which are critically reviewed in this book. It was our aim to sum up existing knowledge with respect to structure and function of venous valves and to expand that knowl edge by findings of our own. Examinations of semi-thin sections and unlabeled en-face preparations have hardly been published so far, and systematic studies of the ultrastructure by electron-microscopy were not to be found in the literature. We are very grateful, therefore, to Dr. Silvana Geleff for having undertaken such a study upon our suggestion.

Venus in India (1889) is an erotic novel by Charles Devereaux. Published pseudonymously, the novel is styled as the autobiography of its fictional author, a young British Cavalry officer whose deployment in India is filled with romantic escapades. “The war in Afghanistan appeared to be coming to a close when I received sudden orders to proceed, at once, from England to join the First Battalion of my regiment, which was then serving there. I had just been promoted Captain and had been married about eighteen months.” Sent to India on a last minute military assignment, Captain Devereaux takes his time arriving at his final destination on the North West Frontier. Along the way, he stops in Nowshera and Cherat, where he wastes no time romancing the wives and daughters of his fellow soldiers. First with the lovely Lizzie Wilson, and then with the daughters of Colonel Selwyn, Charles Devereaux gives himself over to passion and desire, forgetting about his wife and young child at home. Graphic and graceful, comic and provocative, Venus in India is a shining example of nineteenth century erotica in which the power of words to arouse is on full display. With a beautifully designed cover and professionally typeset manuscript, this edition of Charles Devereaux’s Venus in India is a classic of Victorian erotica reimagined for modern readers.

The traditionally separate Fixed, Mobile, and Internet sectors have been evolving recently toward a single sector, offering numerous implications for those involved in technology and business. It is therefore essential for telecommunication professionals to get a keen grasp of where the industry is heading. Providing a solid foundation in the industry, Introduction to Mobile Communications: Technology, Services, Markets explores the core requirements of modern mobile telecommunications—from markets to technology. It explains how wireless systems work, how mobility is supported, the underlying infrastructure, and what interactions are needed among the different functional components. The book also examines how mobile computing can enhance in order to meet the changing needs of users. The information provided in the book comes primarily from the four core modules of the Certificate in Mobile Communications Distance Learning program run by the Informa Telecoms Academy in London. Designed by a highly experienced training development team, the program examines the complex and fascinating world of mobile communications. Designed to give a broad picture of mobile communications, the book provides an excellent grounding for those involved in both business and engineering-leaving them much better equipped to fulfill roles within their current or prospective companies

La crescita esponenziale dell’interesse per la ventilazione non invasiva (NIV) verificatasi negli ultimi 10-15 anni, non solo dal punto di vista clinico e applicativo, ma anche speculativo, ha pochi eguali nella recente storia della medicina. In Italia e in Europa in generale tale metodica è applicata su larga scala, prevalentemente nei reparti di Pneumologia e nelle Unità di Cure Intermedie Respiratorie, mentre per quanto riguarda la sua applicazione nei reparti di Terapia Intensiva Generale (UTI) i dati emersi da uno studio multicentrico condotto nei paesi francofoni vedono la NIV impiegata in una quantità di casi che rappresenta fino al 50% dei pazienti che richiedono assistenza ventilatoria. Il recente studio EUROVENT ha inoltre dimostrato come la NIV non si limiti alla sua applicazione “acuta”, dal momento che circa 25.000 pazienti sono attualmente ventilati “in cronico” a domicilio. Inoltre, si calcola che milioni di cittadini europei soffrono attualmente di disturbi respiratori durante il sonno, e per molti di essi il trattamento medico di prima scelta è rappresentato dalla NIV. Questo libro si propone lo scopo di richiamare l’attenzione sulle più recenti acquisizioni in questo campo, con la speranza di fornire uno strumento valido e maneggevole per la scelta e l’impostazione della migliore modalità di ventilazione.

In Vergil’s Empire, Eve Adler offers an exciting new interpretation of the political thought of Vergil’s Aeneid. Adler argues that in this epic poem, Vergil presents the theoretical foundations of a new political order, one that resolves the conflict between scientific enlightenment and ancestral religion that permeated the ancient world. The work concentrates on Vergil’s response to the physics, psychology, and political implications of Lucretius’ Epicurean doctrine expressed in De Rerum Natura. Proceeding by a close analysis of the Aeneid, Adler examines Vergil’s critique of Carthage as a model of universal enlightenment, his positive doctrine of Rome as a model of universal religion, and his criticism of the heroism of Achilles, Odysseus, and Epicurus in favor of the heroism of Aeneas. Beautifully written and clearly argued, Vergil’s Empire will be of great value to all interested in the classical world.

Where the eye sees the brushstroke, the heart sees the truth. At thirty-five, Gabriella “Ella” Graham is a successful portrait artist in London. She captures the essential truth in each of her subjects’ faces—a tilt of the chin, a glint in the eye—and immortalizes it on canvas. But closer to home, Ella finds the truth more elusive. Her father abandoned the family when she was five, and her mother has remained silent on the subject ever since. Ella’s sister, Chloee, is engaged to Nate, an American working in London, but Ella suspects that he may not be so committed. Then, at Chloee’s behest, Ella agrees to paint Nate’s portrait. From session to session, Ella begins to see Nate in a different light, which gives rise to conflicted feelings. In fact, through the various people she paints—including an elderly client reflecting on her life and a woman dredging the prospect of turning forty—Ella realizes that there is so much more to a person’s life than what is seen on the surface. And as her portraits of Nate and the others progress, they begin to reveal less about their subjects than about the artist herself. Look for special features inside. The first adventure in the Nebula Award–winning author’s “masterful SF trilogy” was the attempted colonization and terraforming of the planet Venus (Publishers Weekly). Iris Angharads, a determined, independent woman, sets herself one massive goal: to make the poison-filled atmosphere of Venus hospitable to humans. She works day and night to realize her dream, with only one person sharing her passion, Liang Chen. It seems impossible to make Venus, with its intolerable air and waterless environment, into a paradise, but Iris succeeds. And in doing so, she also creates a powerful dynasty, beginning with her first born, Benzl Liangharad.

Another hilarious offering from bestselling author Cate Kendall. From the backwaters of Tasmania to the sophisticated streets of Sydney, sisters Bellarene and Serandipity have come a long way. As international flight attendants the world is their oyster – until Sera fell in love and settled for family life. Obsessed with keeping up appearances, Sera goes to extreme lengths to maintain the illusion of perfection, while Bella just wants to fly away from the responsibility of mothering her little sister, from the sadness of her broken marriage, and from memories of the past. Gathering her friends at Stitch ‘n’ Bitch is like therapy. There’s a lot of talk, and not much knitting – and they wouldn’t have it any other way. Dirty Mallory has her own shocks in store, and single mum Chantrea agonises over work and childcare. Widowed single dad, Sam, is terrified of the dating scene, and Sera’s uptight neighbour, Jacqueline, has a little secret, one that could destroy her neatly ordered world. Meanwhile Joan, Sera’s mother-in-law, watches then all and sniffs with disdain at their trivial worries. Sera wants to be perfect. Bella just wants to be free. Will the sisters get what they want?

Venous thromboembolism (VTE) or blood clots are a common feature of advanced disease, occurring in approximately 50% of palliative care inpatients. Whilst the presentation, diagnosis and management of VTE within general medicine is well established, its management within the palliative care setting is less so. This is made more difficult by the clinical presentation often being masked by other palliative care symptoms, and the symptoms being consistent with otherconditions; diagnosis is therefore underappreciated, and the condition difficult to manage. This is a practical guide to those challenges increasingly faced by healthcare professionals managing VTE in advanced disease. It covers epidemiology and pathogenesis, and appraises the current evidenceinforming the prevention, diagnosis and treatment of VTE, in both malignant and non-malignant disease.

All the Best Games: Awesome Facts and Coolest Secrets

Each passing year bears witness to the development of ever more powerful computers, increasingly fast and cheap storage media, and even higher bandwidth data connections. This makes it easy to believe that we can now – at least in principle – solve any problem we are faced with so long as we only have enough data. Yet this is not the case. Although large databases allow us to retrieve many different single pieces of information and to compute simple aggregations, general patterns and regularities often go undetected. Furthermore, it is exactly these patterns, regularities and trends that are often most valuable. To avoid the danger of “drowning in information, but starving for knowledge” the branch of research known as data analysis has emerged, and a considerable number of methods and software tools have been developed. However, it is not these tools alone but the intelligent application of human intuition in combination with computational power, of sound background knowledge with computer-aided modeling, and of critical reflection with convenient automatic model construction, that results in successful intelligent data analysis projects. Guide to Intelligent Data

Analysis provides a hands-on instructional approach to many basic data analysis techniques, and explains how these are used to solve data analysis problems. Topics and features: guides the reader through the process of data analysis, following the interdependent steps of project understanding, data understanding, data preparation, modeling, and deployment and monitoring; equips the reader with the necessary information in order to obtain hands-on experience of the topics under discussion; provides a review of the basics of classical statistics that support and justify many data analysis methods, and a glossary of statistical terms; includes numerous examples using R and KNIME, together with appendices introducing the open source software; integrates illustrations and case-study-style examples to support pedagogical exposition. This practical and systematic textbook/reference for graduates and advanced undergraduate students is also essential reading for all professionals who face data analysis problems. Moreover, it is a book to be used following one’s exploration of it. Dr. Michael R. Berthold is Nycomed-Professor of Bioinformatics and Information Mining at the University of Konstanz, Germany. Dr. Christian Borgelt is Principal Researcher at the Intelligent Data Analysis and Graphical Models Research Unit of the European Centre for Soft Computing, Spain. Dr. Frank H öpner is Professor of Information Systems at Ostfalia University of Applied Sciences, Germany. The key novelty of this book is first of all in the successful attempt to conduct jointly modeling of environment in terms of physical environment related parameters and measuring similar parameters by means of multispectral remote sensing, primarily by means of passive microwave remote sensing technology. Another new step is in the development and utilization of a multilevel approach which

includes remote sensing of the land and water parameters like soil moisture, depth to water table, biomass of vegetation, temperature and salinity of water, in situ measurements of similar parameters and incorporation of GIS and data sets into the models of typical environments. The part of book, which contains remote sensing is focused on multipurpose observations from aircraft obtained in many soil-climatic zones in different countries and is reach of the examples of practical application. Applied mathematicians, geophysicis, hydrologists, socio-economists, statesmans and other researchers of environmental changes will find a wealth of information and ideas in this book.

Two servants discover family skeletons behind the closed doors of a forbidding Manhattan mansion in this mystery by a three-time Edgar Award – winning author. In dire financial straits, young couple Mike and Amy Lloyd—a former cab driver and a New York prep-school teacher, respectively—have signed away their independence to become live-in servants for one of the city’s wealthiest and most private families. At first, the Durie home, a cavernous Gilded Age palazzo off Fifth Avenue, is a maze of intimidation: sixteen other employees, eight Duries in residence, forbidden rooms, and an exact and unbreakable set of rules. For Amy, personal secretary to the aged and blind Miss Margaret, that includes never broaching the subject of her employer’s “condition” or the tragic accident that caused it. On the other hand, Mike, an aspiring writer, is already taking notes for a Dune-inspired novel. A modern gothic, he’s guessing—part Rebecca, part Psycho. Most of the plot, he’ll soon discover, won’t require much imagining. But Amy, bound to the servitude of the matriarch—a woman cut off from the world for fifty years—is growing more curious and unnerved by Miss Margaret’s demands: the sudden trips to the Plaza hotel, the mysterious bank transactions, and an extended invitation to a stranger for a private dinner. By the time Amy realizes the truth—that she and her husband have been enlisted as unwitting accomplices in a subtly played series of moves that could lead to something rather unspeakable—it could be too late.

The inimitable Richard Jury returns in the latest in the bestselling mystery series: “Martha Grimes has written a whodunit with terrific characters and a grand plot mixed with her unique droll wit. Vertigo 42 is one smart mystery!” (Susan Isaacs, bestselling author of Goldberg Variations) Richard Jury is meeting Tom Williamson at Vertigo 42, a bar on the forty-second floor of an office building in London’s financial district. Despite inconclusive evidence, Tom is convinced his wife, Tess, was murdered seventeen years ago. The inspector in charge of the case was sure Tess’s death was accidental—a direct result of vertigo—but the official police inquiry is still an open verdict and Jury agrees to re-examine the case. Jury learns that a nine-year-old girl fell to her death five years before Tess at the same place in Devon where Tess died, at a small house party. Jury seeks out the five surviving party guests, who are now adults, hoping they can shed light on this bizarre coincidence. Ultimately, four deaths—two in the past, two that occur on the pages of this intricate, compelling novel—keep Richard Jury and his sidekick Sergeant Wiggins running from their homes in Islington to the countryside in Devon and to London as they try to figure out if the deaths were accidental or not. And if they are connected. Witty, well-written, with literary references from Thomas Hardy to Yeats, Vertigo 42 is a pitch perfect, page-turning novel from a mystery writer at the top of her game.

When that good old horse took me away from Borroloola on the long journey to Darwin, it changed my life forever ... I stopped being an Aboriginal girl and became a half-caste girl. From someone who had so much, I was now some -had nothing, with no past and an unknown future. Hilda Muir was born on the very frontier of modern Australia near the outback town of Borroloola in the about 1920. Her early life was spent roaming the Gulf Country hunting and gathering with her family. Her mother was a Yanyuwa person, and so was Hilda. Known to the clan as Jarman, it mattered little that her father was an unknown white man. This small girl had a name, a loving family, and a secure Aboriginal identity. This book tells of Hilda’s bush childhood, and her force dremoval from a loving family to the rigours of life in the Kahlin Home for half-caste children. Hilda grew up to marry the love of her life, Billy Muir, and then had to learn to deal with the demands -of a growing family and evacuation to Brisbane during the Second World War. Back in Darwin – and after the devastation of Cyclone Tracy, Hilda struggled to find her place in the world again. In 1995, Hilda Muir was one of those chosen to present a writ to the High Court on behalf of her fellow stolen-generation, asserting that the removals were illegal as well as immoral. In 1997 the writ was rejected by the High Court. In 2000 Hilda finally travelled back to her Yanyuwa land and v was recognised as an owner and custodian of that country. Today Hilda Muir, her Aboriginal children, grandchildren and great-grandchildren are living reminders that governments cannot always shape human lives in ways they might wish.

Venus and Mercury have long been regarded as difficult targets for amateur observers, but advances in commercially-made telescopes have brought them within the skills of observers of only moderate experience. Peter Grego’s fascinating book presents an up-to-date, detailed description of the history and geology of the so-called inferior planets, and provides the latest, most useful advice on observing and recording them with commercially-available telescopes and cameras. The book also offers a wealth of detailed practical information on every aspect of observing, from safely targeting the two planets, through visual observing, to sketching and electronic imaging.
