"What does everyone in the modern world need to know? [The author's] answer to this most difficult of questions uniquely combines the hard-won truths of ancient tradition with the stunning revelations of cutting-edge scientific research. [The author discusses] discussing discipline, freedom, adventure and responsibility, distilling the world's wisdom into 12 practical and profound rules for life"--

Since 1965, Donald Ayers' English Words from Latin and Greek Elements has helped thousands of students to a broader vocabulary by showing them how to recognize classical roots in modern English words. Its second edition, published in 1986, has confirmed that vocabulary is best taught by root, not rote. The importance of learning classical word roots is already acknowledged by vocabulary texts that devote chapters to them. Why a whole book based on this approach? Ayers' text exposes students to a wider range of roots, introduces new English words in context sentences, and reinforces vocabulary through exercises. It promotes more practice with roots so that students learn to use them as tools in their everyday encounters with new words. English Words is written from the standpoint of English; it neither attempts to teach students Latin or Greek nor expects a knowledge of classical languages on the part of instructors. Its success has been demonstrated at both the secondary and college levels, and it can be used effectively with students in remedial or accelerated programs. An instructor's Manual (gratis with adoption) and a Workbook are also available.

Part of a sequential series for teaching English to grades 1-8. Level 1 includes daily lessons for first grade students. Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

David Crystal's classic English as a Global Language considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However, Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language.

In spite of the immense progress of Akkadian and Semitic linguistics in recent decades, no systematic diachronic treatment of the the Akkadian vocabulary has been carried out. The Akkadian vocabulary itself has been relatively well disclosed in two major dictionaries, but the Akkadian language has not been sufficiently studied and analysed as a linguistic reservoir. The Etymological Dictionary of Akkadian presents a comparative and historical analysis of the entire Akkadian vocabulary in a systematic and comprehensive manner. Akkadian is the oldest transmitted Semitic language (from ca. 2600 BCE till the end of the first millennium BCE) and with an extant textual corpus of ca. 10 million words it is one of the best documented languages of the ancient world, comparable to the Latin record until the 3rd century CE. Akkadian was the main language of the Babylonian and Assyrian empires and the lingua franca of the ancient Near East used, for example, by the Hittites and Egyptians in international correspondence. The Akkadian language is therefore crucial in reconstructing early Semitic historical grammar, and, due to its central role in a vast geographical and culturally diverse are over a long period of time, Akkadian is unequivocally important as the origin, receptor, and transmitter of both Semitic and non-Semitic loan and foreign words whose traces can, for example, be found in modern languages.

One of the outstanding problems of the biologist, whether he be beginning student or specialists, is that of understanding technical terms. The best way to understand and remember technical terms is to understand first their component parts, or roots. This dictionary has been designed primarily to meet the needs of the beginning student, the medical student, and the taxonomist, but it should be of value to all biologists.

In Antiracist Writing Assessment Ecologies, Asao B. Inoue theorizes classroom writing assessment as a complex system that is "more than" its interconnected elements. To explain how and why antiracist work in the writing classroom is vital to literacy learning, Inoue incorporates ideas about the white racial habitus that informs dominant discourses in the academy and other contexts.

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

Fear drives me forward as I rush down a rocky path in Jerusalem, trying to sort things out even as dusk makes it harder to hurry. Am I really an American girl, cast back to the time of Jesus? Or a delusional Jewish teen, plagued with visions of a place called America, thousands of years in the future? I don't know anymore. But I do know that something awful is about to happen to my Jesus: they're going to arrest him tonight, and kill him. No one believes me; they think I'm crazy. So it's up to me to save him, hurrying down this dark path toward Gethsemane, toward the turning point of all history, the attempt to kill Jesus . . . toward the uncertainty of whether I can actually manage to change the future. The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

" —BCCB *After his dad dies of suicide, Will tries to overcome his own misery by secretly helping the people around him in this exquisitely crafted story made up of one hundred chapters of one hundred words each, by award-winning and bestselling author Alison McChee. Sixteen-year-old Will spends most of his days the same way. Working at the Dollar Only store, trying to replicate his late father's famous cornbread recipe, and walking the streets of Los Angeles. Will started walking after his father committed suicide, and three years later he hasn't stopped. But there are some places Will can't walk by: The blessings store with the chest of 100 Chinese blessings in the back, the bridge on Fourth Street where his father died, and his childhood friend Playa's house. When Will learns Playa was raped at a party—a party he was at, where he saw Playa, and where he believes he could have stopped the worst from happening if he hadn't left early—it spurs Will to stop being complacent in his own sadness and do some good in the world. He begins to leave small gifts for everyone in his life, from Superman the homeless guy he passes on his way to work, to the Little Butterfly Dude he walks by on the way home, to Playa herself. And it is through those acts of kindness that Will is finally able to push past his own trauma and truly begin to live his life again. Oh, and discover the truth about that cornbread.**
