*The second volume in the SIRCA book series investigates the impact of information society initiatives by extending the boundaries of academic research into the realm of practice. Global in scope, it includes contributions and research projects from Asia, Africa and Latin America. The international scholarly community has taken a variety of approaches to question the impact of information society initiatives on populations in the Global South. This book addresses two aspects– Impact of research: How is the research on ICTs in the Global South playing a role in creating an information society? (e.g. policy formulation, media coverage, implementation in practice) and Research on impact: What is the evidence for the impact of ICTs on society? (i.e. the objectives of socio-economic development). This volume brings together a multiplicity of voices and approaches from social scientific research to produce an engaging volume for a variety of stakeholders including academics, researchers, practitioners, policy-makers and those in the business and civil sectors of society.*

*This book, the first study of its kind, examines the economics behind motorsports, in particular Formula One. Chapters discuss the costs involved in Formula racing and how they are borne by teams, promoters and racers. The book also looks at how society, the public and the private sectors stand to benefit economically from the motorsport industry. Other issues like the economics of TV rights, sponsorship and sustainability are also addressed, again for the first time in an economics book. Moving beyond the economics of what happens off the track, the book also undertakes a serious examination of what goes in to making a winning team and what having a winning racer can do for a team's fortunes. Mourão's highly relevant and contemporary book also looks at how motorsport teams confront the challenges of the modern sporting world, including the changing dynamics of sports media and considers the future of Formula 1 as motorsports evolve.*

*""The report is essential reading for policy makers, government workers, and academics pursuing the goal of equitable, sustainable development across the world."" - N. R. Narayana Murthy, Chairman and Chief Mentor Infosys Technologies Ltd. Information and communication technology (ICT) is rapidly evolving, changing rich and poor societies alike. It has become a powerful tool for participating in the global economy and for offering new opportunities for development efforts. ICT can and should advance economic growth and reduce poverty in developing countries. It has been 20 years since the first telephone operator was privatized, a little over 10 since the World Wide Web emerged, and 5 since the telecommunications bubble burst. How have the ICT sector and its role in development evolved? What have we learned? How can we move forward? Information and Communications for Development 2006: Global Trends and Policies contains lessons from both developed and developing countries. It examines the roles of the public and private sectors, identifying the challenges and the benefits of adopting and expanding ICT use. The report assesses topics essential to building an information society, including investment, access, diffusion, and country policies and strategies. Assessing what has worked, what hasn't, and why, this report is an invaluable guide for understanding how to capture the benefits of ICT around the world."*

For today's shell-shocked individual investors, financial expert Charles B. Carlson offers hands-on advice on how to survive ¶ and thrive ¶ in a wildly fluctuating market. The economic recession of the past year, followed by the tragedy of September 11, sent a ripple of panic through investors in 2001. The market shed trillions of dollars in wealth, and hundreds of thousands of individual investors suffered substantial financial losses. The volatility we experienced last year was more than a fluke, argues investment expert Charles B. Carlson. With the ongoing changes in the economy, including changes in corporate reporting laws, instant availability of financial information, and the ability to buy and sell stocks with the touch of a keystroke, volatility is here to stay. But volatility isn't necessarily a bad thing. In fact, Carlson argues, if you know how to weather today stormy markets, investing in them can be very profitable. In The Smart Investor's Survival Guide, Carlson shows investors how to make volatility work to their advantage. First, he argues, it is critical that investors match their investment style ¶ growth, value, buy and hold ¶ to the kinds of stocks they pick. For long-term investors, Carlson recommends that a portion of their portfolio be invested in what he calls the calm eye of the storm, ¶easy hold¶ stocks that have consistent, steady growth, and very low volatility. Even in the terrible market downturn of 2000, when the Nasdaq lost 39 percent of its value and stocks like Lucent and Cisco saw their share price drop by 80 percent or more, a number of investment sectors actually gained in value. The Dow Jones index, minus its technology stocks, broke even. In other words, even in the worst markets, not every stock or sector goes down. Through what he calls the nine essential laws of successful investing in a volatile market, Carlson reveals: ¶ How to diversify the portfolios across stock sectors and investment vehicles ¶ The critical importance of matching one's investment style ¶ value, growth, buy and hold ¶ to the kinds of stocks one invests in ¶ The importance of ¶easy hold¶ ¶ no-brainer stocks ¶ in a portfolio, stocks that will grow 10 to12 percent a year with minimal volatility. Written by one of the most trusted names in the financial community, The Smart Investor's Survival Guide shows investors how to master today's turbulent markets, and profit from them.

Health Communication: Strategies and Skills for a New Era provides a practical process model for developing a health communication intervention. The book also explores exposure to media and how it shapes our conceptions of health and illness. Using a life stages and environments approach, the book touches on the patient role and how we 'hear' information from health care providers as well as guidance on how to be a thoughtful consumer of health information.

As a discipline of academy inquiry, International Management applies management concepts and techniques to their contexts in firms working in multinational, multicultural environments. Hodgetts ' Luthans: International Management was the first mainstream International Management text in the market. Its 6th edition continues to set the standard for International Management texts with its research-based content and its balance between culture, strategy, and behavior. International Management stresses the balanced approach and the synergy/connection between the text ' s four parts: Environment (3 chapters): Culture (4 chapters), Strategy and Functions (4 chapters) and Organizational Behavior /Human Resource Management (4 chapters).

This is an open access book. Media industry research and EU policymaking are predominantly tailored to large (and, in the latter case, Western) European markets. This open access book addresses the specific qualities of smaller media markets, highlighting their vulnerability to global digital competition and outlining survival strategies for them. New online distribution models and new trends in the consumption of audiovisual content are limited by, and pose new challenges for, existing audiovisual business models and their legal framework in the EU. The European Commission's Digital Single Market (DSM) strategy, which was intended e.g. to remove obstacles to the cross-border distribution of audiovisual content, has triggered a heated debate on the transformation of the existing ecosystem for European screen industries. While most current discussions focus on the United States, Western Europe, and the multinational giants, this book approaches these industry trends and policy questions from the perspective of relatively small and peripheral (in terms of their population, language, cross-border cultural flows, and financial and/or symbolic capital) media markets. .

It's been ten years since open data first broke onto the global stage. Over the past decade, thousands of programmes and projects around the world have worked to open data and use it to address a myriad of social and economic challenges. Meanwhile, issues related to data rights and privacy have moved to the centre of public and political discourse. As the open data movement enters a new phase in its evolution, shifting to target real-world problems and embed open data thinking into other existing or emerging communities of practice, big questions still remain. How will open data initiatives respond to new concerns about privacy, inclusion, and artificial intelligence? And what can we learn from the last decade in order to deliver impact where it is most needed? The State of Open Data brings together over 60 authors from around the world to address these questions and to take stock of the real progress made to date across sectors and around the world, uncovering the issues that will shape the future of open data in the years to come.

This Special Issue of Sustainability on "Partnerships for the Sustainable Development Goals (SDGs)" brings together a collection of articles that explore a diverse range of issues and challenges faced by partnership arrangements that seek to support the achievement of the SDGs and the United Nations 2030 Agenda for Sustainable Development. As well as encompassing a diverse range of collaborative forms and themes, and involving a variety of stakeholders, these collaborative initiatives are all notably shaped by the dynamics of the particular contexts in which they operate. These contexts include individual, organizational, sectoral, spatial, and geographical settings. The impact of the COVID-19 pandemic on partnering for the SDGs is also apparent. The interplay between these elements offers a useful global-local context for further inquiry and reflection on how deeper and more meaningful collaborative relationships might be developed to achieve the SDG targets and beyond

This book will offer ideas on how robots can be used as teachers' assistants to scaffold learning outcomes, where the robot is a learning agent in self-directed learning who can contribute to the development of key competences for today's world through targeted learning - such as engineering thinking, math, physics, computational thinking, etc. starting from pre-school and continuing to a higher education level. Robotization is speeding up at the moment in a variety of dimensions, both through the automation of work, by performing intellectual duties, and by providing support for people in everyday situations. There is increasing political attention, especially in Europe, on educational systems not being able to keep up with such emerging technologies, and efforts to rectify this. This edited volume responds to this attention, and seeks to explore which pedagogical and educational concepts should be included in the learning process so that the use of robots is meaningful from the point of view of knowledge construction, and so that it is safe from the technological and cybersecurity perspective.

***Solitons in Action is a collection of papers that discusses the concept of a wave packer or pulse known as a soliton. One paper reviews the development of the solitary wave concept, with emphasis on the difference between a solitary wave and a soliton. The Korteweg-deVries (KdV) equation shows the interactions between infinite sets of conservation laws and the inverse scattering transform method. The Backlund transform technique produces hierarchies of multisoliton solutions for nonlinear wave equations. The Gel'fand-Levitan algorithm can effect an inverse scattering calculation that relates changes in the scattering data to changes in the solution of corresponding wave equation. One paper points out that concepts in differential geometry can show the fundamental nature of soliton behavior and the relationship between inverse scattering and the Backlund transformation. Solitons in action can be viewed as magnetic flux propagates through a gap (between two closely-spaced superconductors) in quantum units. This view results in a simplified procedure for perturbation expansions around multisoliton solutions. This collection can prove useful for researchers involved in the study of fluid mechanics, of pure and applied sciences, of mathematical sciences, and of wave theory.***

***This publication identifies the role of digital infrastructure in achieving the Sustainable Development Goals (SDGs)—including education, employment, agricultural sustainability, food security, and spatial inequality—in 12 countries in Latin America and the Caribbean. It identifies a gap between the outcomes achieved for each SDG in the countries studied and those achieved in OECD countries. Moreover, the region still has a long way to go to achieve the SDG targets set in the 2030 Agenda for Sustainable Development. The authors explain how investment in digital infrastructure can help close the gaps between the region and these two benchmarks (OECD countries and SDG targets). They also quantify the investment in telecom in the region between 2008 and 2017 and estimate what amount is still needed to help close these gaps.***

**Advisor of Leadership at Google and former vice president of leadership at LinkedIn claims that the biggest driver of motivation is the chance to serve a larger purpose beyond our careers and ourselves, rather than salary, benefits, bonuses, or other material incentives; companies that are able to successfully focus their people, their teams, and their culture around meaning outperform their competition. Fred Kofman's approach to leadership has little to do with the standard practices taught in business school and traditional books. Bringing together economics and business theory, communications and conflict resolution, family counseling and mindfulness mediation, Kofman argues in *The Meaning Revolution* that our most deep-seated, unspoken, and universal anxiety stems from our fear that our life is being wasted--that the end of life will overtake us when our song is still unsung. Material incentives--salary and benefits--account for perhaps 15 percent of employees' motivation at work. The other 85 percent is driven by a need to belong, a feeling that what we do day in and day out makes a difference, that how we spend our time on earth serves a larger purpose beyond just ourselves. Kofman claims that transcendental leaders, wherever they are in the hierarchy, are able to put aside their self-interests and help others to feel connected with others on a team or in an organization on a great mission and part of an ennobling purpose. He argues that every organization involved in work that is nonviolent and non-addictive has what he calls an "immortality project" at its core. And the challenge for leaders is to identify and expand on that core, to inspire all stakeholders to take part.**

If asked, most people would agree that there are deep connections between technology and the modern world, and even that technology is the truly distinctive feature of modernity. Until recently, however, there has been surprisingly little overlap between technology studies and modernity theory. The goal of this ambitious book is to lay the foundations for a new interdisciplinary field by closely examining the co-construction of technology and modernity. The book is divided into three parts. Part I lays the methodological groundwork for combining studies of technology and modernity, while integrating ideas drawn from feminism, critical theory, philosophy, sociology, and socioeconomics. Part II continues the methodological discussion, focusing on specific sociotechnical systems or technologies with prominent relations to modernity. Part III introduces practical and political issues by considering alternative modes of technology development and offering critiques of modern medicine, environmental technology, international development, and technology policy. The book as a whole suggests a broad research program that is both academic and applied and that will help us understand how contemporary societies can govern technologies instead of being governed by them.

The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

With over 80 per cent of global trade by volume and more than 70 per cent of its value being carried on board ships and handled by seaports worldwide, the importance of maritime transport for trade and development cannot be overemphasized.
