In this incisive and revealing book, Richard Bourne shows how a country which had every prospect of success when it achieved a delayed independence in 1980 became a brutal police state with hyperinflation, collapsing life expectancy and abandonment by a third of its citizens less than thirty years later. Beginning with the British

housing bubble that caused the Great Recession—and earned Wall Street fantastic profits. The American housing bubble of the 2000s caused the worst global financial crisis since the Great Depression. In this definitive account, Adam Levitin and Susan Wachter pinpoint its source: the shift in mortgage financing from securitization by Fannie Mae and Freddie Mac to “private-label securitization” by Wall Street banks. This change set off a race to the bottom in mortgage underwriting standards, as banks

competed in laxity to gain market share. The Great American Housing Bubble tells the story of the transformation of mortgage lending from a dysfunctional, local affair, featuring short-term, interest-only "bullet" loans, to a robust, national market based around the thirty-year fixed-rate mortgage, a uniquely American innovation that served as the foundation for the middle class. Levitin and Wachter show how Fannie and Freddie's market power kept risk in check until 2003, when mortgage financing

shifted sharply to private-label securitization, as lenders looked for a way to sustain lending volume following an unprecedented refinancing wave. Private-label securitization brought a return of bullet loans, which had lower initial payments—enabling borrowers to borrow more—but much greater back-loaded risks. These loans produced a vast oversupply of underpriced mortgage finance that drove up home prices unsustainably. When the bubble burst, it set off a

destructive downward spiral of home prices and foreclosures. Levitin and Wachter propose a rebuild of the housing finance system that ensures the widespread availability of the thirty-year fixed-rate mortgage, while preventing underwriting competition and shifting risk away from the public to private investors.

To a certain extent, the story of Robby's life and death is a mystery. No therapist was able to offer a definitive diagnosis. Robby's personality, so charismatic one moment, so irrational the next, defied categorizing. His downward spiral was inexorable and inexplicable. When he finally lost his battle with mental illness, it was as if a grey shroud had been pulled over my family's world. This tragedy was incomprehensible to me and made me look deep inside my soul to try to find some answers. Art provides perspective and insight. It helps people work out their feelings creatively. I did not realize it at the time, but the paintings I did during

this period were duplicating his journey from the real world into one of confusion and madness. When I found Robby's journals it was evident that he was able to recognize what was happening to him. I spent weeks reading and rereading Robby's writings and comparing them with my artwork. There was an almost ethereal connection. It was then that I made the commitment to write this book and try to explain the deep relationship between a mother and her son by telling his story through the twin lenses of my painting and his writing. This book probes deeper into the events of Robby's life and death. I want to explore questions

From the 1980s to the present, the author has been taking the message of process improvement and customer-focused excellence far and wide. Most of these travels, usually in connection with delivering a seminar, include brief factory tours in which he compiled

Many of the caselets bring to life process-improvement methodologies in detail. The design discouraged patient participation; conventional oncologists discouraged patients from joining and at times pressured those already admitted for nutritional therapy to change to more conventional treatment. Then in 2000 the NCI insisted that all patient selection decisions be turned over to the Principal Investigator, who as it turned out helped develop the

Repeatedly, the Principal Investigator approved patients for the nutritional treatment who did not meet the entry requirements, or who were too ill or uncommitted to follow the self-administered regimen. An evaluation by government scientists in early 2005 confirmed that so many patients had failed to follow the prescribed nutritional therapy that the data had little meaning. Despite such problems, without Dr. Gonzalez's knowledge the Principal Investigator published

How modern economics abandoned classical liberalism and lost its way Milton Friedman once predicted that advances in scientific economics would resolve debates about whether raising the minimum wage is good policy. Decades later, Friedman's prediction has not come true. In *Where Economics Went Wrong*, David Colander and Craig Freedman argue that it never will. Why? Because economic policy, when done correctly, is an art and a craft. It

is not, and cannot be, a science. The authors explain why classical liberal economists understood this essential difference, why modern economists abandoned it, and why now is the time for the profession to return to its classical liberal roots. Carefully distinguishing policy from science and theory, classical liberal economists emphasized values and context, treating economic policy analysis as a moral science where a dialogue of sensibilities and judgments allowed for the same scientific basis to arrive at a variety of policy recommendations. Using

Equally troubling, these policies have been devastating to both American productivity and our long-term competitiveness. Many reasons for these failures have been proposed. Globalization. Union greed. Outsourcing. But none of these explanations can address the harsh truth that many countries around the world are dramatically outperforming the U.S. in

And this is despite the fact that these countries are more exposed than America to outsourcing and globalization and have much higher levels of union membership. In *What Went Wrong*, George R. He provides a fascinating comparison between the America and the experience of the "family capitalism" countries: Australia, Austria, Belgium,
