Consumer Reports Buying Guide 2008

Even though you are just one person who may have never done anything extraordinary before, you can change the world. Did you know: * Every day the Earth receives enough solar energy to heat every home in the world for one year--free. * It takes twenty trees to keep one baby in disposable diapers for two years. * Of the billion pounds of pesticides used each year in the U.S., less than one percent reaches a pest. * The average American throws out their own weight in packaging every month. * If your office recycled one ton of the paper it uses, you'd be saving seventeen trees and keeping sixty

pounds of air pollution out of the sky. There are hundreds of tips in this book, but don't let the numbers throw you. Even if you follow just one or two of the suggestions provided, tangible progress will be made towards restoring vitality to the Earth. In IEA Member countries, electrical appliances are the fastest growing energy users, after automobiles. Cost-effective technology exists that could improve the energy efficiency of appliances by more than one-third in ten years. Through application of such technology, the greenhouse gases emitted as a result of the use of appliances in IEA Member countries alone could be slashed by the equivalent of 322 million tonnes of CO₂ per year by 2010. This book assesses the potential energy savings and carbon reductions to be achieved through technical improvements to appliances. It analyses the policy options available to stimulate greater manufacture and use of more efficient appliances. It suggests ways to strengthen existing appliance-efficiency programmes, and it demonstrates how international collaboration can enhance those programmes (IEA Website)

Socio-economic Impacts Associated with Proposed Energy Efficiency Standards for Refrigerators, Refrigerator-freezers, Room Air Conditioners and Central Air Conditioners

This book, written by two authoritative figures in the area of energy technology, is the first to thoroughly describe in simple, clear language the technology known as superinsulation. Appropriate for anyone involved in residential construction and for students of engineering technology, it provides a conceptual understanding of the superinsulated house as well as details for assembling the construction elements of such a system. Includes over 250 photos and architectural drawings.
