#1 NEW YORK TIMES BESTSELLER • Brené Brown has taught us what it means to dare greatly, rise strong, and brave the wilderness. Now, based on new research conducted with leaders, change makers, and culture shifters, she's showing us how to put those ideas into practice so we can step up and lead. Look for Brené Brown's new podcast, Dare to Lead, as well as her ongoing podcast Unlocking Us! NAMED ONE OF THE BEST BOOKS OF THE YEAR BY BLOOMBERG Leadership is not about titles, status, and wielding power. A leader is anyone who takes responsibility for recognizing the potential in people and ideas, and has the courage to develop that potential. When we dare to lead, we don't pretend to have the right answers; we stay curious and ask the right questions. We don't see power as finite and hoard it; we know that power becomes infinite when we share it with others. We don't avoid difficult conversations and situations; we lean into vulnerability when it's necessary to do good work. But daring leadership in a culture defined by scarcity, fear, and uncertainty requires skill-building around traits that are deeply and uniquely human. The irony is that we're choosing not to invest in developing the hearts and minds of leaders at the exact same time as we're scrambling to figure out what we have to offer that machines and AI can't do better and faster. What can we do better? Empathy, connection, and courage, to start. Four-time #1 New York Times bestselling author Brené Brown has spent the past two decades studying the emotions and experiences that give meaning to our lives, and the past seven years working with transformative leaders and teams spanning the globe. She found that leaders in organizations ranging from small entrepreneurial startups and family-owned businesses to nonprofits, civic organizations, and Fortune 50 companies all ask the same question: How do you cultivate braver, more daring leaders, and how do you embed the value of courage in your culture? In this new book, Brown uses research, stories, and examples to answer these questions in the no-BS style that millions of readers have come to expect and love. Brown writes, "One of the most important findings of my career is that daring leadership is a collection of four skill sets that are 100 percent teachable, observable, and measurable. It's learning and unlearning that requires brave work, tough conversations, and showing up with your whole heart. Easy? No. Because choosing courage over comfort is not always our default. Worth it? Always. We want to be brave with our lives and our work. It's why we're here." Whether you've read Daring Greatly and Rising Strong or you're new to Brené Brown's work, this book is for anyone who wants to step up and into brave leadership.

Metaphors and exercises play an incredibly important part in the successful delivery of acceptance and commitment therapy (ACT). These powerful tools go far in helping clients connect with their values and give them the motivation needed to make a real, conscious commitment to change. Unfortunately, many of the metaphors that clinicians use have become stale and ineffective. That's why you need fresh, new resources for your professional library. In this breakthrough book, two ACT researchers provide an essential A-Z resource guide that includes tons of new metaphors and experiential exercises to help promote client acceptance, defusion from troubling thoughts, and values-based action. The book also includes scripts tailored to different client populations, and special metaphors and exercises that address unique problems that may sometimes arise in your therapy sessions. Several ACT texts and workbooks have been published for the treatment of a variety of psychological problems. However, no one resource exists where you can find an exhaustive list of metaphors and experiential exercises geared toward the six core elements of ACT. Whether you are treating a client with anxiety, depression, trauma, or an eating disorder, this book will provide you with the skills needed to improve lives, one exercise at a time. With a special foreword by ACT cofounder Steven C. Hayes, PhD, this book is a must-have for any ACT Practitioner.

Stimulate neurologically-impaired clients' executive functioning with activities that use relevant content, themed around home activities and home maintenance. Written in the best-selling format of the WALC series, Executive Functioning includes reproducible exercises and activities that can be used in individual or group situations. Many of the tasks involve working memory, which taps into the client's general knowledge base, and encourages the client to ask others for help or to use whatever is available to gain the information they need to answer a question accurately. Most of the tasks provide answers for the client to choose from, which stimulates two specific thinking processes: First, it causes the client to evaluate all of the choices to determine whether the provided items fit the question, giving the client practice with self-analyzing and selection based on fact and appropriateness. Second, as these exercises were not developed for word finding or memory for general information

improvement, the client won't be penalized if he has those deficits along with executive thinking deficits. Many of the items have multiple appropriate answers, which gives the client practice with thought flexibility. Many of the exercises have already been answered and the client must analyze whether the selected response was accurate. This provides practice with meta-cognitive skills for identifying, analyzing and planning. Several exercises have no right or wrong answers, as the responses will be based on the client's subjective opinions and preferences. Many of the tasks will assist the client in developing decision-making skills, based on fact as opposed to unverified opinions. The second edition of the "red book" builds on the original by adding 70 pages of entirely new exercises and 1,000 rewritten questions. An empirically-supported program for helping anxious and depressed children (ages 8 to 11). The Professional Guide discusses theoretical and clinical issues related to the treatment of anxious and depressed children, including indications-contraindications for using these cognitive-behavioral techniques, and cultural adaptations. Provides suggestions for working with parents and conducting groups. Includes numerous references.

This new fourth edition is designed for use with adults who have suffered a stroke or other brain injury or who are affected by the aging process. While the fundamental format covering such skills areas as visual scanning, reading, observing, information acquisition, listening, memory, and abstract reasoning has remained the same, each of the individual training sections has been revised and updated with additional exercises and teacher suggestions for the teacher-learner team. More training exercises have been added, and the authors address how to use some of the new technology now readily available to enhance the rehabilitation process. The authors focus on the importance of personal choice, responsibility, health, and wellness in successful recovery. The book is designed to be most beneficial when the teacher and learner interact on a one-to-one basis, so that individual needs can be incorporated effectively into the training sessions. Additionally, the exercises encourage the use of basic learning principles such as immediate feedback and positive reinforcement while gradually increasing the difficulty level of the exercises. For each of the training sections, specific suggestions are offered to assist the teacher in finding additional exercises and activities that are personally relevant to the learner. The Thinking Skills Workbook will be a valuable tool for facilitating the recovery of cognitive skills and is written for easy use by professional rehabilitation staff, paraprofessionals, and/or family members. The incorporation of these effective learning strategies, along with the many revisions, will make the book very useful and provide for a rewarding experience for both teacher and learner.

I was hired by a major university to teach recently released offenders how to become employed. I walked into my first class intending to follow the lead of all the other job training programs in the city, which was teaching the students to properly fill out applications, write resumes, facilitate mock interviews, and locate employment opportunities. After the first couple of classes, most of the students were either not paying attention or sleeping. I quickly realized my presentation needed to be interesting, challenging, beneficial, and actually guide the participants on how to remain employed. However, I was unable to find any published material for teaching new hires the soft skills necessary to keep a job. This workbook is a compilation of the soft skills class material I have developed over an eighteen year period. I have used this material with great success and have taught soft skills in schools, inner-city church programs, nonprofits, and government funded job training programs. It is a unique collection of essays, exercises, quotes, and maxims that will give students a realistic perspective on work-related expectations and the expectations of the supervisors who hire them. It will help students develop their problem solving skills, guide them in making appropriate decisions, and create a desire to plan out goals and achieve them. The workbook style is challenging and playful, serious and engaging and a stepping stone to developing the cognitive skills necessary to quash unproductive thinking and self-defeating emotional behaviors.

In the past 15 years a host of critical thinking books have appeared that teach students to find flaws in the arguments of others by learning to detect a number of informal fallacies. This book is not in that tradition. The authors of this book believe that while students learn to become vicious critics, they still continue to make the very mistakes they criticize in others. Thus, this book has adopted the

approach of teaching the construction of good arguments first and then introducing criticism as a secondary skill. Moreover, the emphasis of the book is not on learning to name fallacies, but on being able to identify weaknesses in an argument so as to be able to construct an effective critique of that argument. The book is accompanied by a workbook featuring a wealth of examples to help students acquire the material.
